

If you provide toilet, shower and canteen facilities on site, you'll want a safe waste water storage solution that you can rely on.

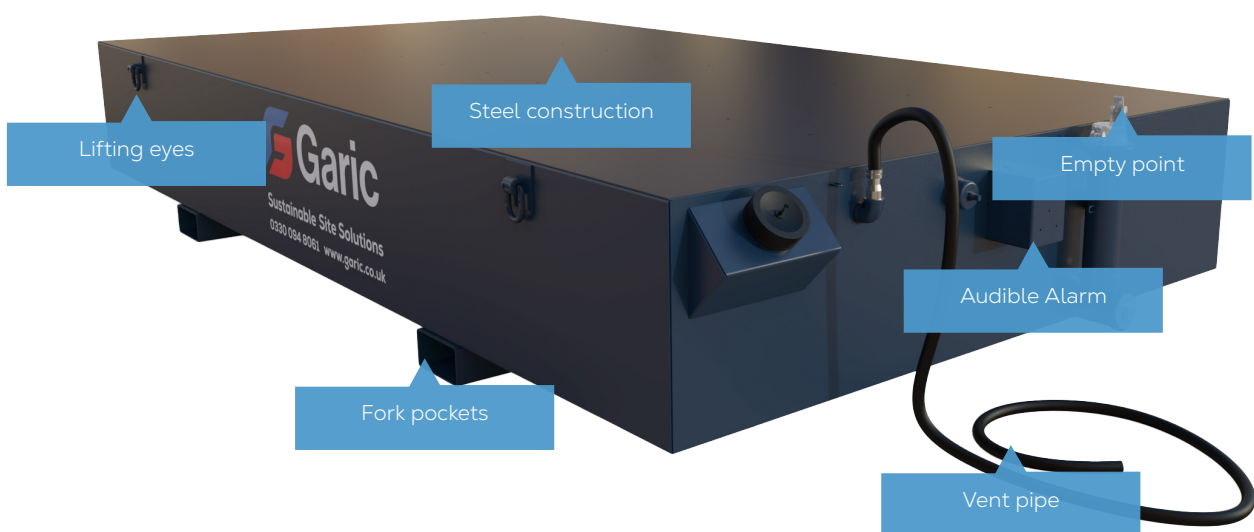

Garic can supply waste tanks to contain a variety of dirty and discarded liquids. Each steel tank is manufactured to the highest quality to prevent leakage and avoid environmental hazards. These tanks have an audible alarm feature to signal high capacity, a high level vent pipe to eradicate odours. All of these features are unique and give you further peace of mind that any waste substances and pollutants will be completely contained.

And as soon as your tanks are full, just one call to our 5-star servicing team is all you need to organise the quick and safe removal of all your site sewage and grey water waste. At every stage we'll provide you with a fully documented paper trail so you have evidence of your site's waste disposal.

Key Features:

- Securely stores all waste
- Audible alarm feature to signal high capacity
- High level vent pipe to eradicate odours
- Waste substances and pollutants will be completely contained at all times

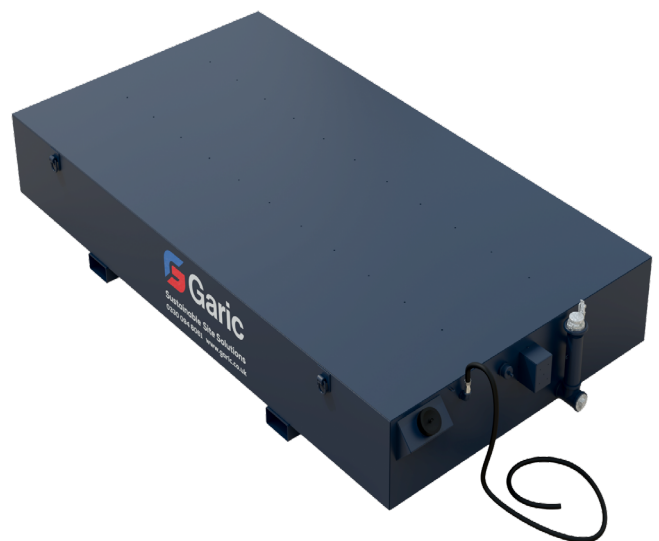

Minimum hire **1 week**
